

## LEGEND OF QUALIFIERS

### ***Organic Qualifiers:***

- A - Tentatively identified compound is a suspected aldol condensation.
- U - Compound analyzed but not detected.
- E - Compound exceeded calibration range.
- D - Compound analyzed at a secondary dilution factor.
- J - Compound detected but below the contract required quantitation limit (the value given is an estimate).
- N - Identification of tentatively identified compound is based on a mass spectral library search.
- S - Spiked compound.
- B - Compound was found in the method blank.
- P - The Relative Percentage Difference (RPD) between the initial and the confirmation was greater than 50%.
- Q - Elevated reporting level.

### ***Inorganic Qualifiers:***

- B - The reported values is less than the Contract Required Detection Limit (CRDL) but greater than the Instrument Detection Limit (IDL).
- E - The reported value is estimated because of the presence of interference.
- M - Duplicate injection precision is not met.
- N - Spiked sample recovery is not within control limits.
- S - The reported value was determined by the Method of Standard Additions (MSA).
- U - The analyte was analyzed but not detected.
- W - Post digestion spike for furnace AA analysis is out of control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.
- \* - Duplicate analysis is not within control limits.
- + - Correlation coefficient for the MSA is less than 0.995.
